

NO.005 Squamous papilloma

<ul style="list-style-type: none"> ➤ 此病變為向外(exophytic)生長的上皮增生病變，由 HPV(types 6、11)感染所引起。低倍下可見向外增生的上皮呈現手指頭般的突起 (fingerlike prohections)。 (Fig. 1 yellow ↑) ➤ 有腰身 (pedunculate)，所以記得標出 pedunculated stalk。 (Fig. 1 red ↑) ➤ 增生上皮內可見 connective tissue core。 (Fig. 1 blue ↑) ➤ Basement membrane 完整，connective tissue 也正常 	<p>標記重點：</p> <ol style="list-style-type: none"> 1. Connective tissue core (Fig. 1 blue ↑) 2. Keratinized stratified squamous epithelium 增生 3. Papilla (finger-like projection) with fibrovascular connective tissue cores (Fig. 1 yellow ↑) 4. Pedunculated stalk(腰身)(Fig. 1 red ↑)
