

高雄醫學大學附設中和紀念醫院口腔病理診斷科X光報告單

患者姓名：陳 XX 病歷號碼：1367XXXX 性別：女 年齡：65

送檢醫師：沈也雄 攝影日期：96/03/13 報告日期：96/04/23

臨床診斷：Cystic lesion over embedded horizontal tooth, left mandible body

攝影方式： periapical  panoramic  TMJ view  
 cephalometry  occlusal  sialography  
 others

X 光診斷：(1) Dentigerous cyst over embedded horizontal tooth, left mandible body  
(2) Ameloblastoma over embedded horizontal tooth, left mandible body  
(3) Residual cyst with an embedded horizontal tooth, left mandible body

Main X-ray findings :

**Panoramic film:** There is a well-defined unilocular ovoid shaped radiolucence with a corticated margin over an embedded horizontal tooth over the left mandible body, extending from root apex of tooth 35 and 38 to cortical bone border displaced mandibular canal and from tooth 35 to tooth 38 , approximately 5×3 cm in maximum diameter.

**Periapical film:** It showed an radiolucence involved the horizontal embedded tooth, with distance from the inferior alveolar bone surface to the superior border of radiolucence about 0.8 cm.

Sinus: Unremarkable, bilateral

Condyle: Unremarkable, bilateral

Dental findings :

- Tooth abnormality: submerged horizontal impaction tooth
- Caries:
- Periodontal condition: general horizontal bony defect
- Calculus:
- Missing tooth:18,26,28,34,36,37,45,46,48
- Endodontic condition:35,
- Restoration (e.g. C & B):└5X7 ,┐3X5X8 ,7XX4┘ C & B
- Filling (e.g. amalgam):
- Residual root:
- Others:
